Figures shown are past results for Class A shares and are not predictive of results in future periods. Current and future results may be lower or higher than those shown. Prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Unless otherwise indicated, results shown are at net asset value and do not reflect a sales charge. If the 5.75% maximum Class A sales charge had been deducted, results would have been lower. Focus beyond the U.S.

International Growth and Income Fund:

- Normally invests at least 90% of its assets outside the United States.
- Relies on extensive global research to find companies with strong management teams, potential for long-term growth and a commitment to paying dividends.

Dividend opportunity

As of 6/30/23, the fund's 12-month distribution rate of 2.88% was higher than the 1.82% rate of the Lipper International Funds Average, the fund's peer group. The fund's annualized 30-day yield as of 7/31/23, calculated at maximum offering price in accordance with the Securities and Exchange Commission formula, was 2.29%*.

Benefits of dividends

For investors, the fund's dividend focus:

- Offers an opportunity to receive regular income with the possibility of gains in the underlying stocks.
- Can help reduce volatility because dividends may continue to be paid even when the price of a stock declines.

The fund's solid start

The fund commenced operations in October 2008. As the chart shows, the fund has had lower volatility and a higher return than its benchmark, the MSCI All Country World Index (ACWI) ex USA.

Return vs. volatility (10/31/08–6/30/23)

*12-month distribution rates, also known as 12-month yields, are calculated at net asset value by Lipper and do not reflect a sales charge. The SEC yield reflects the rate at which the fund is earning income on its current portfolio of securities, while the 12-month distribution rate reflects the fund's past dividends paid to shareholders. Accordingly, the fund's SEC yield and distribution rate may differ.

†Volatility is calculated at net asset value using annualized standard deviation (based on monthly returns), a common measure of absolute volatility that shows how returns over time have varied from the mean; a lower number signifies lower volatility.
